

5 REASONS NOT TO POSTPONE YOUR CAT'S CHECK-UP

Regular wellness exams are vital to ensuring your kitty has a long, happy, and healthy life.

CATS AGE MUCH MORE RAPIDLY THAN HUMANS

A cat reaches the human age of 15 during its first year, and 24 by its second year. Each year after, your cat ages 4 "cat years" for every calendar year.

CATS ARE MASTERS OF HIDING ILLNESS AND PAIN

Your cat could be developing a health condition long before you notice anything is wrong. Veterinarians are trained to spot and detect these problems.

SUBTLE CHANGES COULD MEAN BIG PROBLEMS

Changes in your cat's eating patterns, weight, or activity level can often be hard to notice. Make a list of information, concerns or questions and bring them to your veterinarian.

YOUR CAT MAY BE OVERWEIGHT

Over 50% of cats are overweight or obese. Your veterinarian will check your cat's weight and provide recommendations to help keep your cat at their ideal weight.

PREVENTIVE CARE IS BETTER THAN REACTIVE CARE

Regular exams can help avoid medical emergencies since veterinarians can often detect conditions or disease that may affect your cat's health long before they become significant, painful, or more costly to treat.

CONTACT YOUR VETERINARIAN AND SCHEDULE A ROUTINE EXAM TODAY!
